Create bot

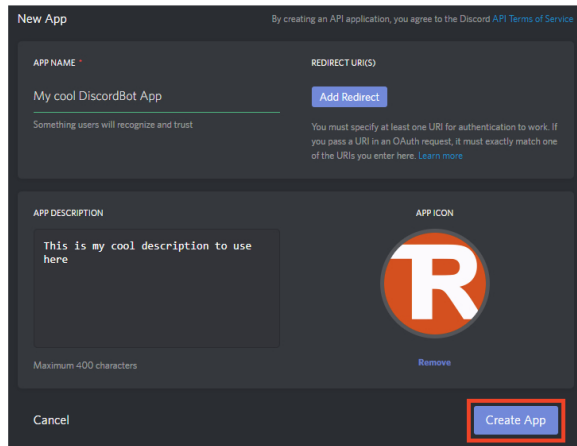

This tutorial will guide you step by step through the process of creating an bot.

Create your bot user

Header over to the [discord developer page](#). Then press on the button "New app".

Then enter the details for your application and click "Create App"

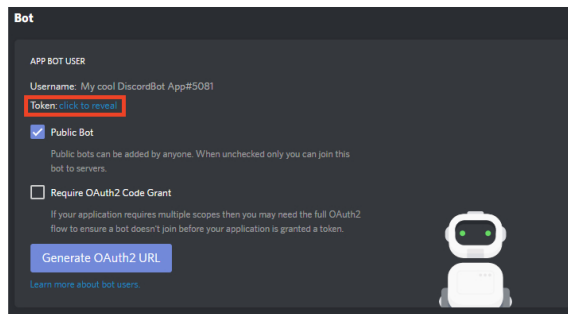

Now thats pretty cool, we have created a application with a fancy name and description.

Please note the client ID on top in "App details", we will need this one later.

But now we need a bot user to join to our server :) So click on Create a Bot User under your app description, this appears after you have clicked on "Create App". Then confirm the message with "Yes, do it!".

Now click "click to reveal" to show your token, save this to clipboard or to a file, we will need this later.

Finally click on "Save changes" at the bottom to the page. You can close this page now.

Create your bot instance at DiscordBotService

Login to your account or register if you dont have one and press on "Bots" in the navigation bar at the top of the page.

Then click on "Add bot". A modal will appear. Now you need to insert the information saved from above.

Details

- 🕒 Version #7

Actions

- ✎ Bearbeiten
- 📄 Kopieren
- 📁 Verschieben
- 📅 Versionen
- 🔒 Berechtigungen
- 🗑️ Löschen
- 📄 Exportieren

Go to the discord Developer Page / Apps and enter the following details:

ClientID
13141444444444444444

Token
[Redacted]

Bot
[Redacted]

Displayname
[Redacted]

Owner
[Redacted]

Submit your changes with a click on "Create" and wola your bot is now registered! Feel free to enable functions and set permissions, more about this on other tutorials. Have fun!

Invite the bot to your server

You must bind the bot to your server, to do so click on "Invite" for the bot you would like to bind to your server. Discord allows inviteing the bot to multiple servers but my service allows only one server per bot. After you clicked on the link select the server you want the server to join and confirm it.
